

THE DISTRICT

SICILY VALLEY

The Sicily Valley District aims to draw all economic sectors towards a digital transition. This technology will present fasci-

nating prospects for new research horizons in the coming decades: From materials science to biotechnology, from genetics to artificial intelligence and digital, from particle physics to the care of humans and the planet, up to the great convergence of disciplines essential to face the great challenges of science and humanity as well as environmental issues. The progress of hi-tech seems to accelerate thanks to the symbiotic relationship between the explosion of the capabilities of digital technology and the growth of scientific research,

which is changing the way we work and live, particularly in terms of the principles of eco-sustainable development. Sicily Valley is the most innovative, complete and integrated vertical production chain of companies operating in the various Hi-Tech sectors, from experimental and industrial research and development, to digital and industrial design and production. In addition to the major Sicilian Universities, over 90 companies have already joined the District, with a total of over 15,000 employees.
